100 Marathon Club Course Measuring Criteria for New Zealand Marathons

1) Distance measurement of marathons on road courses:

These may be measured by: Road wheel fitted with an accurate measurement device or by bicycle fitted with an accurate measurement device, with an optional counter check of the distance by GPS.

2) Distance measurement of marathons on off-road courses:

These may be measured by: either of the principal methods detailed in 1) or in a motor vehicle provided that it has an accurate odometer calibrated - as a minimum, to read in hundred of metres. GPS check of the distance can be carried out as a counter verification, but is not sufficiently accurate by itself to be the sole method of distance measurement.
